

# BOUT++

### PDE Solver Framework for Plasma Models

Ben Dudson<sup>1</sup>, **Peter Hill**<sup>1</sup>, Joseph Parker<sup>2</sup>, John Omotani<sup>2</sup>, David Dickinson<sup>1</sup>, **David Schwörer**<sup>3</sup>, the BOUT++ team

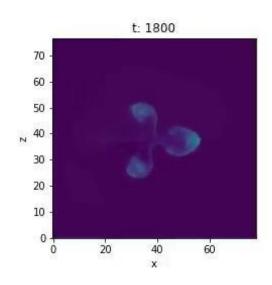

<sup>1</sup> Department of Physics, University of York, UK <sup>2</sup> Culham Centre for Fusion Energy, Abingdon, UK <sup>3</sup> Max-Planck-Institut für Plasmaphysik, Germany

### BOUT++

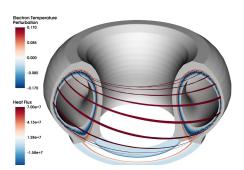

- Internationally used framework for solving PDEs in curvilinear geometry
- Specialised operators for plasma applications
- Domain-specific language in C++

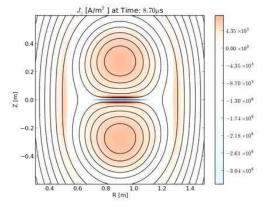

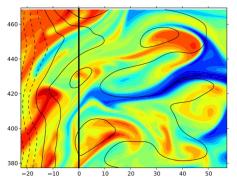

### **BOUT++ Capabilities**

- Finite difference/volume in 3D mapped multi-block geometry
- Solves nonlinearly coupled hyperbolic, parabolic and elliptic equations
- MPI-parallelised, scales to ~4,000 cores, depending on problem
- Turbulence ~10<sup>6</sup>—10<sup>8</sup> unknowns, ~10<sup>5</sup> core-hours

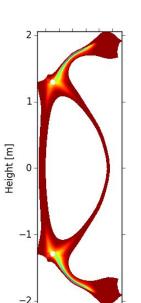

Magnetic reconnection

Turbulence

UNIVERSITY

Transport

0.40.60.81.01.21.4 Major radius [m]

## **BOUT++ Applications**

Many different models have been built on BOUT++

Different sets of equations, different geometries

	<u>Topics</u>		<u>Formulation</u>	<u>Models</u>
•	Edge Localised Modes Pedestal transport Filaments / blobs SOL turbulence Pellet injection RF interactions Magnetic	•	Drift-reduced fluid Gyro-fluid Landau fluid closures Zonal flows Neutral interactions Impurity species	elm-pb/3f/5f/6f STORM Hermes SD1D CYTO Trans-neut BOUT++ GEM
36	Perturbations			

### BOUT++ Is Open Source

- Open source, users/developers worldwide
- Strong community, and investment in building capabilities to underpin research

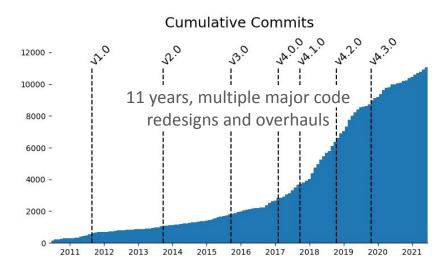

#### <u>Top contributors</u>

Peter Hill Ben Dudson **David Dickinson** David Schwörer John Omotani Michael Loiten Joseph Parker Jens Madsen Jarrod Leddy George Breyiannis Brendan Shanahan Ilon Joseph Hong Zhang +~35 others

### Matrix-free Method of Lines

Elliptic solvers

**Arithmetic** operators

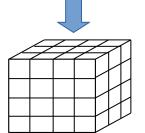

Evolving fields e.g. density

**Spatial** derivatives

Communication

Time derivatives of each field

**ODE** time integrator

```
class Blob2D : public PhysicsModel { ← Class inheriting from PhysicsModel
private:
  // Evolving variables
                                        Model variables, input parameters
 Field3D n, omega;
public:
 int init(bool restarting); ←
                                     — Model setup and initialisation
  int rhs(BoutReal time); ←
                                        Calculation of time derivatives
                                     — Macro creating main entry point
BOUTMAIN(Blob2D); ←
```

## **BOUT++ Example Model**

https://github.com/boutproject/BOUT-dev/tree/master/examples/blob2d

$$\begin{split} \frac{\partial n}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla n + \frac{2\rho_s}{\partial z} + D_n \nabla_{\perp}^2 n \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{D_{vort}}{n} \nabla_{\perp}^2 \omega \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{1}{B} \underline{b} \times \nabla \phi \cdot \nabla \omega + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{2\rho_s}{n} \frac{\partial n}{\partial z} + \frac{2\rho_s}{n} \frac{\partial n}{\partial z} \\ \frac{\partial \omega}{\partial t} &= -\frac{2\rho_s}{n} \frac{$$

### **BOUT++** Flexibility

- Guiding principle of BOUT++ is flexibility
- Choice of numerical method for each operator
- Can be specified at runtime or compile time

#### **BOUT.inp input file:**

```
[mesh]
nx = 64
ny = 1
nz = 64
```

```
[mesh:ddx]
first = C4
second = C2
[mesh:ddz]
first = U2
```

#### blob2d.cxx source code:

#### **Command line:**

```
./blob2d solver:type=rk4 laplace:type=petsc
   mesh:nx=128 mesh:ddx:first=C2
```

### **BOUT++ Python Interface**

- Cython wrapper around C++ interface
- Useful for post-processing and term decomposition

https://github.com/boutproject/boutcore-examples/blob/main/blob2d.py

```
class Blob2D(PhysicsModel):
 def init(self, restart):
 def rhs(self, time):
   ddt_n = self.n.ddt() # Limitation of Python
   ddt_n.set(0)
                 # interface
   ddt_n += -bracket(self.phi, self.n)
            + 2 * DDZ(self.n) * self.rho_s
            + self.D_n * Delp2(self.n)
   self.phi = self.laplacian.solve(self.omega,
                                    self.phi)
```

```
# Create an instance
blob2d = Blob2D()
# Start the simulation
blob2d.solve()
```
